

ENERGY POLICY

With a vision of sustainable development of the company, the Management of Metlen Energy & Metals S.A. | M Power Projects (MPP), is committed to the effort to reduce energy consumption and emissions related to its activities. MPP's field of activities covers design, development, procurement, management, construction, commissioning, operation, and maintenance of turnkey integrated projects.

To achieve our main goal, which is to reduce the energy footprint of the company's operational activity, the Management is committed to:

- The full compliance of the company with the legal, regulatory and other requirements governing its operation,
- The provision of any necessary resource and/or information to achieve corporate energy goals and objectives,
- The evaluation of critical and important supplies for the operation of the company during business planning, in light of the possibility of improving energy performance, and
- Full support in the implementation of corporate energy programs.

This will be achieved through:

- The implementation of the Energy Management System, according to ISO 50001:2018,
- Setting specific energy monitoring indicators,
- Monitoring and measuring the critical energy aspects of the company,
- defining, implementing and updating programs to improve our energy efficiency,
- raising awareness of all participants in the company's energy performance, and
- the regular review of the Energy Policy and its communication to all interested parties.

Top Management is committed to both establishing and regularly reviewing M Power Projects' energy targets and programs, for the continuous improvement of its energy efficiency and Energy Management System.

Metlen Energy & Metals S.A., June 2024

Kostas Horinos

M Power Projects Executive Director
